

A novel signaling mechanism between gas and blood compartments of the lung

Wolfgang M. Kuebler, ... , Ping M. Wang, Jahar Bhattacharya

J Clin Invest. 2000;106(4):607-607. <https://doi.org/10.1172/JCI8604C1>.

Corrigendum

During the preparation of this manuscript for publication, an error was introduced in Figure 7. The correct version, accompanied by the legend, appears below. Figure 7 Effects of cPLA2 and its products. (a and b) Tracings from single experiments. Alveolar or capillary routes of TNF- α infusion are indicated. Replicated 4 times each. (c) Group data for indicated inhibitors given in 10-minute alveolar infusions before alveolar infusion of TNF- α ; n = 4 for each. AP < 0.05 vs. baseline (open bar). BP < 0.05 vs. TNF- α (solid bar). COCF3, AACOCF3; indo, indomethacin; MK, MK886; WEB, WEB 2170BS. (d) Alveoli were permeabilized by 10-minute saponin infusions. Then arachidonate was infused into permeabilized (closed circles) and control (open circle) alveoli. Each point is the mean \pm SEM of 4 experiments. Line was drawn by linear regression (P < 0.001).

A novel signaling mechanism between gas and blood compartments of the lung

Wolfgang M. Kuebler, Kaushik Parthasarathi, Ping M. Wang, and Jahar Bhattacharya

J. Clin. Invest. 105:905–913 (2000).

During the preparation of this manuscript for publication, an error was introduced in Figure 7. The correct version, accompanied by the legend, appears below.

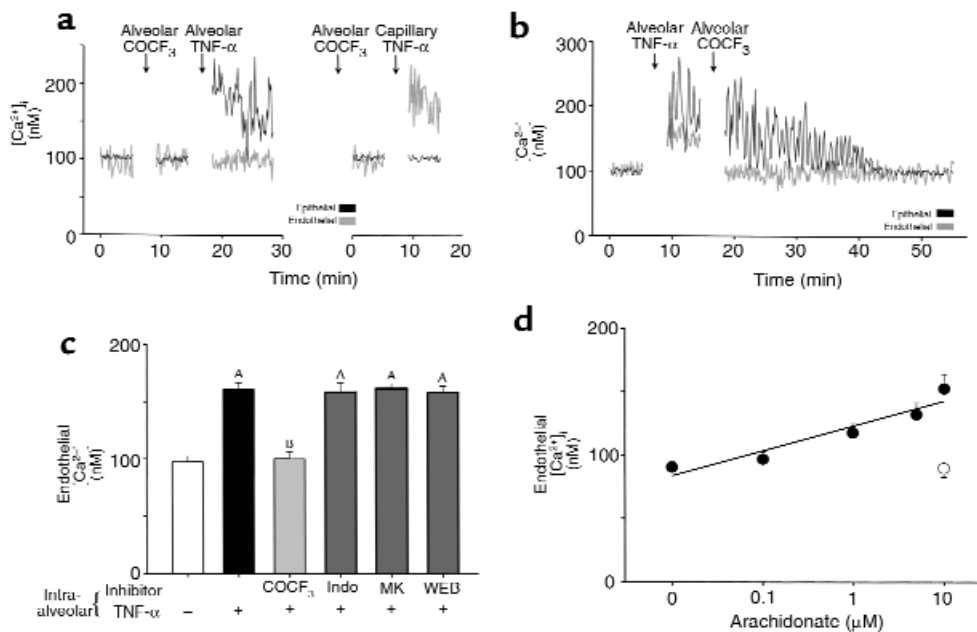

Figure 7

Effects of $cPLA_2$ and its products. (a and b) Tracings from single experiments. Alveolar or capillary routes of $TNF-\alpha$ infusion are indicated. Replicated 4 times each. (c) Group data for indicated inhibitors given in 10-minute alveolar infusions before alveolar infusion of $TNF-\alpha$; $n = 4$ for each. ^A $P < 0.05$ vs. baseline (open bar). ^B $P < 0.05$ vs. $TNF-\alpha$ (solid bar). $COCF_3$, AACOCF₃; indo, indomethacin; MK, MK886; WEB, WEB 2170BS. (d) Alveoli were permeabilized by 10-minute saponin infusions. Then arachidonate was infused into permeabilized (closed circles) and control (open circle) alveoli. Each point is the mean \pm SEM of 4 experiments. Line was drawn by linear regression ($P < 0.001$).
